

2.4 The impact of forces and stresses on ferrous and non-ferrous metals and how they can be reinforced and stiffened	An awareness of the influence of forces and stresses that act on materials and the methods that can be employed to resist them.
	2.4.1 Forces and stresses: - a compression - b tension - c shear - d electrical - e magnetic.
	2.4.2 Reinforcement/stiffening techniques: - a hardening - b tempering - c the effect of carbon content - d work hardening - e I, U, T and C beams.
