

## Topic 8: Perception – How do you interpret the world around you?

| Subject content       | What students need to learn:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>8.1 Perception</b> | <p>8.1.1 Understand examples of, and the reasons for, monocular and binocular depth cues:</p> <p>visual cues, to include:</p> <ul style="list-style-type: none"> <li>a. superimposition</li> <li>b. relative size</li> <li>c. linear perspective</li> <li>d. stereopsis</li> <li>e. texture gradient</li> <li>f. height in the plane</li> </ul> <p>visual illusions, to include:</p> <ul style="list-style-type: none"> <li>g. fictions</li> <li>h. ambiguous figures</li> <li>i. distortions</li> </ul> <p>visual constancies, to include:</p> <ul style="list-style-type: none"> <li>j. shape</li> <li>k. colour</li> <li>l. size</li> </ul> |
|                       | <p>8.1.2 Understand the Direct Theory of Perception (Gibson, 1996) as an explanation of sensation and perception, including strengths and weaknesses of the theory:</p> <ul style="list-style-type: none"> <li>a. sensory input</li> <li>b. optic flow</li> <li>c. invariants</li> <li>d. affordances</li> </ul>                                                                                                                                                                                                                                                                                                                               |
|                       | <p>8.1.3 Understand the Constructivist Theory of Perception (Gregory, 1970) as an explanation of sensation and perception, including strengths and weaknesses of the theory:</p> <ul style="list-style-type: none"> <li>a. sensory input</li> <li>b. perceptual hypothesis</li> <li>c. inferences</li> <li>d. prior knowledge</li> </ul>                                                                                                                                                                                                                                                                                                       |

| Subject content | What students need to learn:                                                                                                                                                                            |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | <p>8.1.4 Understand the effects of the following on perceptual set:</p> <ul style="list-style-type: none"> <li>a. motivation</li> <li>b. expectation</li> <li>c. emotion</li> <li>d. culture</li> </ul> |
