

11.1 Designing psychological research <i>continued</i>	Understand research methods, including the features, strengths and weaknesses of the following, and the types of research for which they are suitable: 11.1.9 laboratory experiment 11.1.10 field experiment 11.1.11 natural experiment 11.1.12 interview, including - structured - semi-structured - unstructured 11.1.13 questionnaire, including - closed-ended questions to elicit quantitative data - open-ended questions to elicit qualitative data 11.1.14 correlation 11.1.15 case study 11.1.16 observation
11.2 Data analysis	11.2.1 Arithmetic and numerical computation: - recognise and use expressions in decimal and standard form - estimate results - use an appropriate number of significant figures
	11.2.2 Be able to understand and use, including calculations: - mean, and finding arithmetic means - median - mode - ratios - fractions - percentages - range as a measure of dispersion - know the characteristics of normal distributions

Subject content	What students need to learn:
	11.2.3 Be able to: a. construct and interpret frequency tables and diagrams b. construct and interpret bar charts c. construct and interpret histograms d. construct a scatter diagram e. use a scatter diagram to identify a correlation between two variables f. translate information between graphical and numerical forms g. plot two variables from experimental or other data and interpret graphs
	11.2.4 Understand, and know the difference between: a. primary data b. secondary data
	11.2.5 Understand, and know the difference between: a. qualitative data b. quantitative data
