

(g) Time series

Students should be taught to:

plot points as a time series; draw a trend line by eye and use it to make a prediction;

calculate and use appropriate moving averages;

No more than 20 points will be expected.

Up to and including a seven-point moving average.

Content

identify and discuss the significance of seasonal variation by visual inspection of time series graphs;

establish a trend line, with its equation, based on moving averages;

recognise seasonal effect at a given data point and average seasonal effect.

Notes

Trend lines will not be expected to pass through a mean point.

Interpretations may be required.
