

5.3 Rural environments need to adapt to be socially, economically and environmentally sustainable	a) The diversification of farming to generate new income streams: GM crops, specialist crops and food, organic farming, recreation and leisure. (4) b) The range of possible strategies aimed at making rural living more sustainable and improving the quality of life (soil and air quality, water supplies, crop yields, health, employment and housing) for the chosen rural environment. (5) c) Role of different groups of people (national and local government, IGOs, NGOs and local communities) in managing the social, economic and environmental challenges within the chosen rural environment.

Integrated skills	
(1)	Use world maps to show the location of biomes.
(2)	Use flow diagrams to represent the effects of different human activities on ecosystems and rural environments.
(3)	Use and interpret population pyramids.
(4)	Use photographs, marketing and social media to investigate diversification.
(5)	Use socio-economic data to provide evidence that the quality of life has improved.
