

5. Integration		
5.1	Indefinite integration as the reverse of differentiation.	Students should know that a constant of integration is required.
5.2	Integration of x^n and related sums, differences and constant multiples.	(Excluding $n = -1$ and related sums, differences and multiples). For example, the ability to integrate expressions such as $\frac{1}{2}x^2 - 3x^{-\frac{1}{2}}$ and $\frac{(x+2)^2}{\sqrt{x}}$ is expected. Given $f'(x)$ and a point on the curve, students should be able to find an equation of the curve in the form $y = f(x)$.
