

2. Algebra and functions		
2.1	Decompose rational functions into partial fractions (denominators not more complicated than repeated linear terms).	Partial fractions to include denominators such as $(ax + b)(cx + d)(ex + f)$ and $(ax + b)(cx + d)^2$. The degree of the numerator may equal or exceed the degree of the denominator. Applications to integration, differentiation and series expansions. Quadratic factors in the denominator such as $(x^2 + a)$, $a > 0$, are <i>not</i> required.
