

8. Proof

8.1

Proof by mathematical induction.

To include induction proofs for

(i) summation of series

e.g. show $\sum_{r=1}^n r^3 = \frac{1}{4} n^2(n+1)^2$ or

$$\sum_{r=1}^n r(r+1) = \frac{n(n+1)(n+2)}{3}$$

(ii) divisibility

e.g. show $3^{2n} + 11$ is divisible by 4.

(iii) finding general terms in a sequence

e.g. if $u_{n+1} = 3u_n + 4$ with $u_1 = 1$, prove that $u_n = 3^n - 2$.

(iv) matrix products

$$\text{e.g. show } \begin{pmatrix} -2 & -1 \\ 9 & 4 \end{pmatrix}^n = \begin{pmatrix} 1-3n & -n \\ 9n & 3n+1 \end{pmatrix}.$$
