

4. Motion in a circle		
4.1	Angular speed.	
4.2	Radial acceleration in circular motion. The forms $r\omega^2$ and $\frac{v^2}{r}$ are required.	
4.3	Uniform motion of a particle moving in a horizontal circle.	Problems involving the ‘conical pendulum’, an elastic string, motion on a banked surface, as well as other contexts, may be set.
4.4	Motion of a particle in a vertical circle.
