

4.3 Thermal energy

This topic covers specific heat capacity, internal energy and the ideal gas equation.

This topic may be taught using applications that relate to, for example, space technology.

Students will be assessed on their ability to:		Suggested experiments
109	investigate, recognise and use the expression $\Delta E = mc\Delta\theta$	Measure specific heat capacity of a solid and a liquid using, for example, temperature sensor and data logger
110	explain the concept of internal energy as the random distribution of potential and kinetic energy amongst molecules	
111	explain the concept of absolute zero and how the average kinetic energy of molecules is related to the absolute temperature	
112	recognise and use the expression $\frac{1}{2}m\langle c^2 \rangle = \frac{3}{2}kT$	
113	use the expression $pV = NkT$ as the equation of state for an ideal gas	Use temperature and pressure sensors to investigate the relationship between p and T Experimental investigation of the relationship between p and V
