

Topic 20: Chemical reactions – Chemical reactions introduction

Students should:		Guidance <i>iLowerSecondary Curriculum reference</i>
20.1	understand the difference between physical changes and chemical changes	<i>Year 7: Chemical reactions – Chemical reactions introduction</i>
20.2	know combustion is a type of reaction	for example, burning magnesium or methane <i>Year 7: Chemical reactions – Chemical reactions introduction</i>
20.3	understand what is meant by a thermal decomposition reaction	including the thermal decomposition of copper carbonate to form copper oxide and carbon dioxide; know how to write a word equation for this reaction and to test for carbon dioxide using limewater <i>Year 7: Chemical reactions – Chemical reactions introduction</i>
