

Topic 25: Chemical reactions – More reactions of acids

Students should:		Guidance <i>iLowerSecondary Curriculum reference</i>
25.1	know the reaction between an acid and a metal oxide as neutralisation	Acid + Metal Oxide -> Salt + Water be able to write word equations for metal oxides reacting with hydrochloric acid and sulfuric acid be able to write chemical equations for the reactions of copper oxide and zinc oxide with hydrochloric acid <i>Year 9: Chemical reactions – More reactions of acids</i>
25.2	know that the reaction between dilute acids and metal carbonates produces carbon dioxide	know the limewater test for carbon dioxide <i>Year 9: Chemical reactions – More reactions of acids</i>
25.3	know the general equation for the reaction between acids and metal carbonates	Acid + Metal Carbonate -> Salt + Water + Carbon Dioxide be able to write word equations for metal carbonates reacting with hydrochloric acid and sulphuric acid be able to write chemical equations for calcium carbonate and copper carbonate reacting with hydrochloric acid <i>Year 9: Chemical reactions – More reactions of acids</i>
