

Topic 28: Energy – Energy stores and energy transfer

Students should:		Guidance <i>iLowerSecondary Curriculum reference</i>
28.1	know joules (J) and kilojoules (kJ) as units of energy	<i>Year 7: Energy – Energy from food and fuels</i>
28.2	understand that energy is stored in different ways: • thermal energy • chemical energy • kinetic energy • gravitational potential energy • elastic potential energy (strain energy) • nuclear energy.	<i>Year 7: Energy – Energy from food and fuels</i>
28.3	understand that energy can be transferred between energy stores but no energy is created or lost	introduce law of conservation of energy <i>Year 7: Energy – Energy transfer</i>
28.4	know ways in which energy is transferred such as by: • light waves • heating • sound waves • electricity • forces.	introduce the idea that energy can be wasted and a simple discussion of efficiency <i>Year 7: Energy – Energy transfer</i>
28.5	know examples of energy stored as gravitational potential energy being transferred to other energy stores	<i>Year 9: Energy – More on energy stores and transfers</i>
28.6	know examples of energy stored as elastic potential energy (strain energy) being transferred to other energy stores	<i>Year 9: Energy – More on energy stores and transfers</i>
