

Topic 38: Waves – Reflection and refraction of light

Students should:		Guidance <i>iLowerSecondary Curriculum reference</i>
38.1	understand the use of ray diagrams and the terms <i>incident ray, reflected ray, normal, angle of incidence</i> and <i>angle of reflection</i>	use the term <i>reflection</i> correctly know the angle of incidence equals the angle of reflection; including applications, for example a simple periscope and the use of a mirror to see around a corner <i>Year 8: Waves – Reflection of light</i>
38.2	know how an image is formed in a plane mirror	use of ray diagrams to show how an image is formed in a plane mirror <i>Year 8: Waves – Reflection of light</i>
38.3	know that refraction is the change of direction of light that happens when light passes from one transparent material to another	limited to air to glass and air to water (and vice versa); considering simple examples such as looking at objects at the bottom of a pool of water/cup of water <i>Year 8: Waves – Refraction of light</i>
