

## 2.5 Inequalities

| Subject content                                                      | Guidance                                                            | Curriculum reference |
|----------------------------------------------------------------------|---------------------------------------------------------------------|----------------------|
| <b>A</b> Understand and use the symbols: $<$ , $>$ , $\leq$ , $\geq$ | State the integers that satisfy<br>$-2 < x \leq 5$                  | A9.3B                |
| <b>B</b> Represent solutions to linear inequalities on a number line | Illustrate the inequality:<br>$-2 \leq x < 5$<br>on the number line | A9.3C                |
| <b>C</b> Solve linear inequalities with one unknown                  | Solve:<br>$x + 3 > 12$<br>$\frac{x}{2} < 5$<br>$4(5 - 2x) \geq 7$   | A9.3A                |
