

2 Subject content and assessment information

Qualification aims and objectives

The sciences should be taught in ways that ensure that students have the knowledge to enable them to develop curiosity about the natural world, insight into working scientifically, and appreciation of the relevance of science to their everyday lives, so that they develop:

- scientific knowledge and conceptual understanding in the areas of biology, chemistry and physics
- understanding of the nature, processes and methods of science through scientific enquiry, which helps them to answer scientific questions on the world around them
- learning of how to apply observational, practical and enquiry-based skills to the world around them
- their ability to begin to evaluate claims based on science through analysis of methods, evidence and conclusions, both qualitative and quantitative.

Scientific enquiry is set out separately but must always be taught through, and be clearly related to, the Pearson Edexcel International Award in Primary Science learning objectives.

Content

Overview

This Pearson Edexcel International Award in Primary Science requires students to demonstrate knowledge, understanding and application of the following learning objectives drawn from years 3, 4, 5 and 6 of the Pearson Edexcel iPrimary Curriculum in Science.

A full list of units that can be used in the assessment is given in *Appendix 2: Units*.
