

Skills	Learners will be expected to demonstrate skills as defined in the Art and Design Core Content section of this specification, in the context of their chosen area(s) of Three-Dimensional Design. In addition, learners will be required to demonstrate skills in all of the following: • selecting and using materials either discretely or in combination, such as metal, foam board, card, glass, mosaic, ceramic, fibre and wood • understanding and application of scale appropriate to the chosen work and direction relevant to learner intention • devising spatial solutions to the various constraints presented by a product, location or environment • using appropriate visual language and terminology within Three-Dimensional Design • problem solving in three dimensions by defining role, function, material, audience and/or client relevant to the context and parameters of their work • understanding and using relevant conventions, production methods and genres in Three-Dimensional Design.
Knowledge and Understanding	Learners must use an appropriate range of processes and techniques using traditional and/or digital media, appropriate to the chosen subject area, enabling research, exploration and the creation of the final outcome(s). Learners will build and evidence an understanding of: • relevant technologies, materials, processes and resources • continuity and change in different genres, styles and traditions relevant to Three-Dimensional Design and the chosen areas of study within this specialism • how ideas, feelings and meanings can be conveyed and interpreted in images, goods and artefacts • how images, goods and artefacts relate to the time and place in which they were made and to their social and cultural context • a working vocabulary and specialist terminology which are relevant to their chosen area(s) of study.
