

### 2.3 Why is it important to understand both past and present developments in design engineering?

- |                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <p>a. Recognise how past and present design engineers, technologies and design thinking have influenced the style and function of products from different perspectives, including:</p> <ul style="list-style-type: none"><li>i. the impact on industry and enterprise</li><li>ii. the impact on people in relation to: lifestyle, culture and society</li><li>iii. the impact on the environment</li><li>iv. consideration of sustainability.</li></ul> |  |
| <p>b. Understand how key historical movements and figures and their methods have had an influence on future developments.</p>                                                                                                                                                                                                                                                                                                                           |  |
