

2f. Fashion and Textiles (H405/01 and H405/02)

The content of this component is focused towards fashion and textiles products and applications and their analysis in respect of:

- materials, components and their selection and uses in fashion and textiles
- industrial and commercial practices
- wider issues affecting design decisions.

It is essential that materials and components are studied from the perspective of analysing modern consumer products that are designed to meet identified consumer needs, their design and manufacture, and taught within the context of

product development and industrial and commercial practices.

Learners should be familiar with a range of materials and components used in the manufacture of commonly available products, and should be able to make critical comparisons between them. The aim of the component is to give learners a framework for analysing existing products, which enables them to make considered selections of appropriate materials and manufacturing processes when designing.

The component brings together the knowledge, understanding and skills acquired in the NEA.

Identifying requirements		Maths & Science
Considerations		
PLES	1.1 What can be learnt by exploring contexts that design solutions are intended for?	
	a. Understand that all design practice is context dependent and that investigations are required to identify what makes a context distinct in relation to: i. environment and surroundings ii. user requirements iii. economic and market considerations iv. product opportunities.
