

4.04 Further Vectors				
4.04a	Equation of a straight line	a) Understand and be able to use the equation of a straight line, in 2-D and 3-D, in cartesian and vector form. <i>Learners should know and be able to use the forms:</i> $y = mx + c$, $ax + by = c$ and $\mathbf{r} = \mathbf{a} + \lambda \mathbf{b}$ in 2-D, and $\frac{x - a_1}{u_1} = \frac{y - a_2}{u_2} = \frac{z - a_3}{u_3} (= \lambda)$ and $\mathbf{r} = \mathbf{a} + \lambda \mathbf{b}$ in 3-D. <i>Includes being able to convert from one form to another.</i>		F1
4.04b	Equation of a plane		b) Understand and be able to use the equation of a plane in cartesian and vector form. <i>Learners should know and be able to use the forms:</i> $ax + by + cz = d$, $\mathbf{r} = \mathbf{a} + \lambda \mathbf{b} + \mu \mathbf{c}$, $(\mathbf{r} - \mathbf{a}) \cdot \mathbf{n} = 0$ and $\mathbf{r} \cdot \mathbf{n} = p$. <i>Includes being able to convert from one form to another.</i>	F2
4.04c 4.04d	Scalar product	c) Be able to calculate the scalar product and use it both to calculate the angles between vectors and/or lines, and also as a test for perpendicularity. <i>Includes the notation $\mathbf{a} \cdot \mathbf{b}$</i>	d) Be able to find the angle between two planes and the angle between a line and a plane.	F3 F4
4.04e 4.04f	Intersections	e) Be able to find, where it exists, the point of intersection between two lines. <i>Includes determining whether or not lines intersect, are parallel or are skew.</i>	f) Be able to find the intersection of a line and a plane.	F5

OCR Ref.	Subject Content	Stage 1 learners should...	Stage 2 learners should additionally...
4.04j			j) Be able to find the shortest distance between a point and a plane. The formula $D = \frac{ \mathbf{b} \cdot \mathbf{n} - p }{ \mathbf{n} }$ where $\mathbf{b}$ is the position vector of the point and the equation of the plane is given by $\mathbf{r} \cdot \mathbf{n} = p$, will be given.
