

Section 4: Data analysis and explanation. (14 marks)

Level 4	11–14 marks • Data and information collected is analysed and interpreted in an effective and coherent manner, with evidence of independence, demonstrating the knowledge and understanding of the techniques appropriate for analysing and explaining data and information. • When appropriate to the topic, statistical analysis and significance testing are used accurately and proficiently for both the data and topic of investigation. • When appropriate to the topic, qualitative and non-numerical analysis techniques are successfully and individually developed and used to support explanations and findings from data and information collected. • The analysis and explanation are relevant and link effectively to the stated aims or questions or hypotheses. • There is effective use of appropriate knowledge, theory and geographical concepts to help explain findings.
Level 3	7–10 marks • Data and information collected is analysed and interpreted in a relevant manner, with evidence of independence, demonstrating the knowledge and understanding of the techniques appropriate for analysing and explaining data and information. • When appropriate to the topic, statistical analysis and significance testing are used with some accuracy for both the data and topic of investigation. • When appropriate to the topic, qualitative and non-numerical analysis techniques are developed and used to support explanations and findings from data and information collected. • The analysis and explanation link to the stated aims or questions or hypotheses. • There is use of appropriate knowledge, theory and geographical concepts to help explain findings.
Level 2	4–6 marks • Data and information collected is analysed and interpreted in a relevant manner, with evidence of independence, demonstrating partial knowledge and understanding of the techniques appropriate for analysing and explaining data and information. • When appropriate to the topic, statistical analysis and significance testing are attempted when appropriate but with limited accuracy for both the data and topic of investigation. • When appropriate to the topic, qualitative and non-numerical analysis techniques are used but with limited success in relation to the overall purpose of the investigation. • The analysis and explanation show only a partial link to the stated aims or questions or hypotheses. • There is some attempt to use appropriate knowledge, theory and geographical concepts to help explain findings.
Level 1	1–3 marks • There is limited evidence of relevant independent analysis and interpretation of data and information. • When appropriate to the topic, statistical analysis and significance testing are absent or largely irrelevant to both the data and topic of investigation. • When appropriate to the topic, qualitative and non-numerical analysis techniques are absent or largely irrelevant to the overall purpose of the investigation. • The analysis and explanation show a poor or irrelevant link to the stated aims or questions or hypotheses. • There are limited or no element of appropriate knowledge, theory and geographical concepts to help explain findings.
