

4.2 STRUCTURE

4.2.1 Recommended Order

The assumed knowledge required to start any unit is stated on the title page of its specification. In general, students are recommended to take the units in any strand in numerical order.

Students will also find it helpful to refer to the diagram on the cover of this specification and also on page 5. The lines connecting the various units indicate the recommended order and the positions (left to right) of the units indicate their level of sophistication.

The assessment of a unit may require work from an earlier unit in the same strand. However such earlier work will not form the focus of a question. This specification has been designed so that in general the applied modules are supported by the techniques in the pure modules at the same level. Where this is not the case, it is highlighted on the unit's title page.

There are, however, no formal restrictions on the order in which units may be taken.
