

1.03 Coordinate Geometry in the x - y Plane

1.03a	Straight lines	a) Understand and be able to use the equation of a straight line, including the forms $y = mx + c$, $y - y_1 = m(x - x_1)$ and $ax + by + c = 0$. <i>Learners should be able to draw a straight line given its equation and to form the equation given a graph of the line, the gradient and one point on the line, or at least two points on the line.</i> <i>Learners should be able to use straight lines to find:</i> <i>1. the coordinates of the midpoint of a line segment joining two points,</i> <i>2. the distance between two points and</i> <i>3. the point of intersection of two lines.</i>		MC1
1.03b		b) Be able to use the gradient conditions for two straight lines to be parallel or perpendicular. <i>i.e. For parallel lines $m_1 = m_2$ and for perpendicular lines $m_1 m_2 = -1$.</i>		
1.03c		c) Be able to use straight line models in a variety of contexts. <i>These problems may be presented within realistic contexts including average rates of change.</i>		

OCR Ref.	Subject Content	Stage 1 learners should ...	Stage 2 learners additionally should ...	DfE Ref.
1.03d 1.03e 1.03f	Circles	d) Understand and be able to use the coordinate geometry of a circle including using the equation of a circle in the form $(x - a)^2 + (y - b)^2 = r^2$. <i>Learners should be able to draw a circle given its equation or to form the equation given its centre and radius.</i> e) Be able to complete the square to find the centre and radius of a circle. f) Be able to use the following circle properties in the context of problems in coordinate geometry: 1. the angle in a semicircle is a right angle, 2. the perpendicular from the centre of a circle to a chord bisects the chord, 3. the radius of a circle at a given point on its circumference is perpendicular to the tangent to the circle at that point. <i>Learners should also be able to investigate whether or not a line and a circle or two circles intersect.</i>		MC2
1.03g	Parametric equations of curves		g) Understand and be able to use the parametric equations of curves and be able to convert between cartesian and parametric forms. <i>Learners should understand the meaning of the terms parameter and parametric equation.</i> <i>Includes sketching simple parametric curves.</i> <i>See also Section 1.07s.</i>	MC3

OCR Ref.	Subject Content	Stage 1 learners should ...	Stage 2 learners additionally should ...	DfE Ref.
1.03h	Parametric equations in context		h) Be able to use parametric equations in modelling in a variety of contexts. <i>The contexts may be within pure mathematics or in realistic contexts, for example those involving related rates of change.</i>	MC4
