

2.03 Probability				
2.03a	Mutually exclusive and independent events	a) Understand and be able to use mutually exclusive and independent events when calculating probabilities. <i>Includes understanding and being able to use the notation:</i> $P(A)$, $P(A')$, $P(X = 2)$, $P(X = x)$. <i>Includes linking their knowledge of probability to probability distributions.</i>		MM1

OCR Ref.	Subject Content	Stage 1 learners should ...	Stage 2 learners additionally should ...	DfE Ref.
2.03b 2.03c 2.03d	Probability	b) Be able to use appropriate diagrams to assist in the calculation of probabilities. <i>Includes tree diagrams, sample space diagrams, Venn diagrams.</i>	c) Understand and be able to use conditional probability, including the use of tree diagrams, Venn diagrams and two-way tables. <i>Includes understanding and being able to use the notations:</i> $A \cap B, A \cup B, A B$. <i>Includes understanding and being able to use the formulae:</i> $P(A \cap B) = P(A) \times P(B A)$, $P(A \cup B) = P(A) + P(B) - P(A \cap B)$. d) Understand the concept of conditional probability, and calculate it from first principles in given contexts. <i>Includes understanding and being able to use the conditional probability formula</i> $P(A B) = \frac{P(A \cap B)}{P(B)}.$ <i>[Use of this formula to find $P(A B)$ from $P(B A)$ is excluded.]</i>	MM1 MM2
2.03e	Modelling with probability		e) Be able to model with probability, including critiquing assumptions made and the likely effect of more realistic assumptions.	MM3
