

3.1.2 Linear motion

Learning outcomes	Additional guidance
<i>Learners should be able to demonstrate and apply their knowledge and understanding of:</i>	
(a) (i) the equations of motion for constant acceleration in a straight line, including motion of bodies falling in a uniform gravitational field without air resistance	M2.2, M2.4, M3.3
$v = u + at$ $s = \frac{1}{2}(u + v)t$	

- (a) (ii) techniques and procedures used to investigate the motion and collisions of objects
- (b) (i) acceleration g of free fall
(ii) techniques and procedures used to determine the acceleration of free fall using trapdoor and electromagnet arrangement or light gates and timer
- (c) reaction time and thinking distance; braking distance and stopping distance for a vehicle.

PAG1 Apparatus may include trolleys, air-track gliders, ticker timers, light gates, data-loggers and video techniques.

PAG1

HSW5 Determining g in the laboratory.
