

4.4.4 Stationary waves

Learning outcomes	Additional guidance
<i>Learners should be able to demonstrate and apply their knowledge and understanding of:</i>	
(a) stationary (standing) waves using microwaves, stretched strings and air columns	
(b) graphical representations of a stationary wave	
(c) similarities and the differences between stationary and progressive waves	
(d) nodes and antinodes	
(e) (i) stationary wave patterns for a stretched string and air columns in closed and open tubes	PAG5
(ii) techniques and procedures used to determine the speed of sound in air by formation of stationary waves in a resonance tube	
(f) the idea that the separation between adjacent nodes (or antinodes) is equal to $\lambda/2$, where λ is the wavelength of the progressive wave	
(g) fundamental mode of vibration (1st harmonic); harmonics.
