

## Section B: Option 1 Child psychology

| Topic                                                  | Background                                                                                     | Key research                                                                                                                              | Application                                                                                  |
|--------------------------------------------------------|------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| <b>Intelligence (Biological)</b>                       | What psychologists mean by intelligence and what biological factors could affect intelligence. | Van Leeuwen et al. (2008)<br>A twin-family study of general IQ.                                                                           | At least one method of assessing intelligence.                                               |
| <b>Pre-adult brain development (Biological)</b>        | Brain development and the impact of this on risk taking behaviour.                             | Barkley-Levenson and Galván (2014)<br>Neural representation of expected value in the adolescent brain.                                    | At least one strategy to reduce risk taking behaviours using knowledge of brain development. |
| <b>Perceptual development (Cognitive)</b>              | Perceptual development in children and how this can be studied in babies and animals.          | Gibson and Walk (1960)<br>The visual cliff.                                                                                               | At least one play strategy to develop perception in young children.                          |
| <b>Cognitive development and education (Cognitive)</b> | Cognitive development in children and the impact of this on education.                         | Wood et al. (1976)<br>The role of tutoring in problem-solving                                                                             | At least one cognitive strategy to improve revision or learning.                             |
| <b>Development of attachment (Social)</b>              | The development of attachment in babies and the impact of failure to develop attachments.      | Ainsworth and Bell (1970)<br>Attachment, Exploration and Separation: Illustrated by the Behavior of One-year-olds in a Strange Situation. | At least one strategy to develop an attachment friendly environment.                         |
| <b>Impact of advertising on children (Social)</b>      | The influence of television advertising on children and the stereotyping in such advertising.  | Johnson and Young (2002)<br>Gendered voices in children's advertising.                                                                    | At least one strategy to reduce impact of advertising which is aimed at children.            |

## Section B: Option 2 Criminal psychology

| Section B: Option 2 Criminal psychology         |                                                                                     |                                                                                                                                  |                                                          |
|-------------------------------------------------|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|
| Topic                                           | Background                                                                          | Key research                                                                                                                     | Application                                              |
| <b>What makes a criminal? (Biological)</b>      | Physiological and non-physiological explanations of criminal behaviour.             | Raine et al. (1997)<br>Brain abnormalities in murderers indicated by positron emission tomography.                               | At least one strategy for predicting criminal behaviour. |
| <b>Forensic evidence (Biological)</b>           | Crime scene processing and reconstruction.                                          | Hall and Player (2008)<br>Will the introduction of an emotional context affect fingerprint analysis and decision-making?         | At least one use for forensic evidence.                  |
| <b>Collection of evidence (Cognitive)</b>       | Collection and use of evidence from witnesses and suspects.                         | Memon, A. and Higham, P. A. (1999)<br>A review of the cognitive interview. <i>Psychology, Crime and Law</i> . 5, (1–2), 177–196. | At least one strategy for police interviews.             |
| <b>Psychology and the courtroom (Cognitive)</b> | How juries can be persuaded by the characteristics of witnesses and defendants.     | Dixon et al. (1998)<br>The Role of Accent and Context in Perceptions of Guilt.                                                   | At least one strategy to influence jury decision making. |
| <b>Situational crime prevention (Social)</b>    | How the features of neighbourhoods and a zero tolerance policy can influence crime. | Wilson and Kelling (1982)<br>The police and neighbourhood safety: Broken windows.                                                | At least one strategy for crime prevention.              |
| <b>Individual crime prevention (Social)</b>     | Punishment and reform as responses to criminal behaviour.                           | Haney et al. (1973)<br>Study of prisoners and guards in a simulated prison.                                                      | At least one strategy for reducing reoffending.          |
