

1.2 Resources required to create digital games

Hardware and peripherals

- ☐ Computer systems
- ☐ Speakers
- ☐ Interface controls
- ☐ Simulators
- ☐ Target platform test beds

Software

- ☐ Games Engine
- ☐ Games Editor
- ☐ Integrated Development Environment (IDE)

To include:

- Key features, capabilities and limitations of game creation hardware and peripherals
- Hardware and peripherals which are best suited to particular game types, genres or platforms
- The positive and negative impacts hardware and peripheral choice has on final games

To include:

- Differences between game IDEs, drag-and-drop visual programming languages and scripting languages
- Why developers would use game engines, game editors, app development or software development kits (SDK)
- The positive and negative impacts which software choice has on final games

Does not include:

- Investigation and comparison of technical features of different software packages for game creation
