

## B1.3 Respiration

### Summary

Metabolic processes such as respiration are controlled by enzymes. Organic compounds are used as fuels in cellular respiration to allow the other chemical reactions necessary for life.

### Underlying knowledge and understanding

Learners should also have some underpinning knowledge of respiration. This should include that respiration involves the breakdown of organic molecules to enable all the other chemical processes necessary for life. Learners should be able to recall the word equation for respiration.

### Common misconceptions

Learners commonly hold the misconception that ventilation is respiration. They can also get confused between the terms breakup and breakdown.

### Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.
