

1. recall examples of natural chemicals in plants which may be toxic, cause harm if not cooked properly, or may give rise to allergies in some people (for example poisonous mushrooms, uncooked cassava, gluten in wheat, peanut allergy);
2. recall an example of a harmful chemical in food, produced by moulds that contaminate crops during storage (for example aflatoxin in nuts and cereals);
3. understand that chemicals used in farming such as pesticides and herbicides may remain in the products we eat;
4. understand that harmful chemicals may form during food processing and cooking;
5. understand the steps that people can take to reduce their exposure to harmful chemicals;
6. understand how food labelling can help consumers decide which products to buy;
7. understand the role of the scientific advisory committees which carry out risk assessments to determine the safe levels of chemicals in food;
8. understand the role of the Food Standards Agency as an independent food safety watchdog set up by an Act of Parliament to protect the public's health and consumer interests in relation to food;
9. In the context of stages in the 'food chain':
 - show awareness that scientific research and applications are subject to official actions and laws;
 - can explain why it is impossible for anything to be completely safe;
 - can identify examples of risk which arise from new scientific or technological advances;
 - can suggest ways of reducing specific risks;
 - can interpret and discuss information on the size of risks, presented in different ways;
 - **can identify, or propose, an argument based on the precautionary principle.**
