

6.04	Algebraic inequalities				
6.04a	Inequalities in one variable	Understand and use the symbols $<$, $\leq$, $>$ and $\geq$	Solve linear inequalities in one variable, expressing solutions on a number line using the conventional notation. e.g. $2x + 1 \geq 7$  A horizontal number line with arrows at both ends. It is marked with integers from 3 to 6. A solid black dot is placed at the number 3, and a horizontal ray extends to the right from this dot. $1 < 3x - 5 \leq 10$  A horizontal number line with arrows at both ends. It is marked with integers from 2 to 5. An open circle is placed at the number 2, and a solid black dot is placed at the number 5. A horizontal line segment connects these two points.	Solve quadratic inequalities in one variable. e.g. $x^2 - 2x < 3$ Express solutions in set notation. e.g. $\{x : x \geq 3\}$ $\{x : 2 < x \leq 5\}$ <i>[See also Polynomial and exponential functions, 7.01c]</i>	N1, A3, A22
6.04b	Inequalities in two variables			Solve (several) linear inequalities in two variables, representing the solution set on a graph. <i>[See also Straight line graphs, 7.02a]</i>	A22

GCSE (9–1) content Ref.	Subject content	Initial learning for this qualification will enable learners to...	Foundation tier learners should also be able to...	Higher tier learners should additionally be able to...	DfE Ref.
