

2c.1. Content of Physical factors affecting performance (J587/01)

Component 01, *Physical factors affecting performance*, introduces and explores some of the physical factors which underpin participation and performance in physical activities and sports.

Learners will start to explore the ways in which parts of the human body work and function during physical activity and the physiological adaptations that can occur due to diet and training. Learners will also develop their knowledge and understanding of the principles of training, why we train in different ways and how training plans can be made to optimise results.

The study of these topics will aid learners in the development of both their own practical performance and that of others.

1.1 Applied anatomy and physiology

Learners will develop knowledge and understanding of the basic structures and functions of body systems that are particularly important to physical activities and sports.

They will also study the short and long-term effects of exercise on these systems, and how these effects can impact on physical fitness and performance.

Learners will develop the ability to collect and use data, analyse movement and apply their knowledge and understanding, using examples from physical activity and sport.
