

1.2.b. Applying the principles of training

Learners will develop their knowledge and understanding of the principles of training. They will be able to define each principle and be able to apply each to personal exercise/training programmes. Learners will develop their knowledge and understanding of how to optimise

training using the FITT principle and different types of training.

Learners will develop their knowledge and understanding of the key components and physical benefits of the warm up and cool down applied to physical activities and sports.

Topic area	Learners must:
Principles of training 	• know the following definitions of principles of training and be able to apply them to personal exercise/training programmes: ◦ specificity ◦ overload ◦ progression ◦ reversibility.
Optimising training 	• know the definition of the elements of FITT (Frequency, Intensity, Time, Type) and be able to apply these elements to personal exercise/training programmes • know different types of training, definitions and examples of: ◦ continuous ◦ fartlek ◦ interval – circuit training – weight training – plyometrics – HIIT (High Intensity Interval Training). • understand the key components of a warm up and be able to apply examples: ◦ pulse raising ◦ mobility ◦ stretching ◦ dynamic movements ◦ skill rehearsal • know the physical benefits of a warm up, including effects on: ◦ warming up muscles/preparing the body for physical activity ◦ body temperature ◦ heart rate ◦ flexibility of muscles and joints ◦ pliability of ligaments and tendons ◦ blood flow and oxygen to muscles ◦ the speed of muscle contraction • understand the key components of a cool down and be able to apply examples: ◦ low intensity exercise ◦ stretching • know the physical benefits of a cool down, including: ◦ helps the body's transition back to a resting state ◦ gradually lowers heart rate ◦ gradually lowers temperature ◦ circulates blood and oxygen ◦ gradually reduces breathing rate ◦ increases removal of waste products such as lactic acid ◦ reduces the risk of muscle soreness and stiffness ◦ aids recovery by stretching muscles.
