
Knowledge, skills and understanding

Content overview

Students should know, understand, apply, critically analyse and evaluate the following content – performing procedures and making connections where appropriate.

This qualification is composed of nine topics. For Topics 1–4, content in the *What students need to learn* column in **bold** will be assessed for this qualification only but will not be assessed as part of the Advanced Subsidiary GCE qualification.

Content indicated with an 'e.g.' is intended to further illustrate core material and is indicative of content that may be assessed. Additional examples not stated in the specification may also be assessed.

There are opportunities for students to develop mathematical skills throughout the content. They are required to apply the skills to relevant psychological contexts. Please see *Appendix 3: Mathematical skills* for further information.

Assessment overview

Students will be assessed through three examination papers, which focus on specific topics in the qualification. Paper 3 is by nature synoptic, however extended writing questions in papers 1 and 2 may ask students to draw on their knowledge from other topics addressed in the paper concerned.

The formulae and statistical tables given in *Appendix 4: Formulae and statistical tables* will also be given in the paper.

Calculators may be used in the examination.

Students may be required to respond to stimulus material using psychological concepts, theories and research from across topic areas.

Students may be asked to consider issues of validity, reliability, credibility, generalisability, objectivity and subjectivity in their evaluation of studies and theories.

Students should be able to define any terms given in the specification.

Relevant psychological skills are contextualised in each topic area. In addition, they have been drawn together in Topic 9 in order to ensure that all content has been covered.
