

4.2 Methods	4.2.1 Human research • The use of the observational research method in psychology, including the gathering of both qualitative and quantitative data (including tallying, event and time sampling). • Types of observation: participant, non-participant, structured, naturalistic overt and covert. • Use of content analysis as a research method.
	4.2.2 Animal research • The use of animals in laboratory experiments where results can be related to humans. • Ethical issues regarding the use of animals in laboratory experiments, including Scientific Procedures Act (1986) and Home Office Regulations.
	4.2.3 Analysis of data • With regard to inferential statistics: levels of measurement; reasons for choosing a chi-squared test; comparing observed and critical values to judge significance; the chi-squared test. • Analysis of qualitative data using thematic analysis.
	4.2.4 Scientific status of psychology, including: • Replicability, reliability, validity (internal, predictive and ecological), reductionism, falsification, empiricism, hypothesis testing, and use of controls.
