

7.2 Methods	7.2.1 Observation • The use of the observational research method in child psychology, including the gathering of both qualitative and quantitative data (including tallying). • Types of observation: participant, non-participant, overt and covert.
	7.2.2 Questionnaire/interview • The use of both questionnaires and interviews in child psychology, including the gathering of both qualitative and quantitative data. • Issues around using questionnaire and interview methods: semi-structured, structured, unstructured interviews; sampling; open and closed questions; social desirability; demand characteristics.
	7.2.3 Cross-cultural research • The use of the cross-cultural research method, including the Strange Situation, in child psychology, including nature-nurture issues and issues of cross-sectional versus longitudinal designs. • The use of meta-analysis using cross-cultural research to draw conclusions about the universality of attachment types.
	7.2.4 The ethics of researching with children, including children's rights and the UNCRC (1989), and issues around participation and protection.
	7.2.5 Data analysis • Analysis of quantitative data using measures of central tendency, frequency tables, measures of dispersion (range and standard deviation). • Analysis of, use of, and drawing conclusions from quantitative data using inferential statistics, including use of chi-squared, Spearman, Mann-Whitney U and Wilcoxon, and issues of statistical significance, levels of measurement, critical and observed values. • Analysis of qualitative data using thematic analysis and grounded theory.
