

2.2 Data representation	2.2.1	understand how computers encode characters using 7-bit ASCII
	2.2.2	understand how bitmap images are represented in binary (pixels, resolution, colour depth)
	2.2.3	understand how analogue sound is represented in binary (amplitude, sample rate, bit depth, sample interval)
	2.2.4	understand the limitations of binary representation of data when constrained by the number of available bits
