

3.2 The sources, origins, physical and working properties of papers and boards and their social and ecological footprint	To apply knowledge and understanding of the advantages, disadvantages and applications of the following materials, in order to be able to discriminate between them and select appropriately.
	3.2.1 Paper: - a copier paper (in topic 1) - b cartridge paper (in topic 1) - c tracing paper (in topic 1) - d bond - e heat transfer printing paper (sublimation printing).
	3.2.2 Board: - a folding boxboard (in topic 1) - b corrugated board (in topic 1) - c solid white board (in topic 1) - d foil-lined board.
	3.2.3 Packaging laminate (including Tetra Pak™): - a paperboard - b polyethylene - c aluminium foil.
	3.2.4 Sources and origins – where paper and boards are resourced/manufactured and their geographical origin: - a China, USA, Japan – pulp, paper and cardboard - b Eastern Asia – rice paper.
	3.2.5 The physical characteristics of each type of paper and board: - a density - b transparency - c texture.
	3.2.6 Working properties – the way in which each material behaves or responds to external sources: - a flexibility (in topic 1) - b printability (in topic 1) - c biodegradability (in topic 1) - d weight - e surface finish - f printability - g absorbency.

PAPERS AND BOARDS

Key idea	What students need to learn:
	3.2.7 Social footprint: - a trend forecasting - b impact of material production on communities and wildlife - c impact of logging and material production on communities and wildlife - d recycling/disposal – ethical responsibility - e reduction of packaging materials – reduction in litter/waste/energy use - f brand identity – consumerism, changing the packaging of products over time.
	3.2.8 Ecological footprint: - a sustainability - b harvesting and erosion of the landscape - c processing - d transportation - e wastage - f pollution.
