From Touching the Void

Joe and Simon are mountain climbing in the Andes, when Joe has a terrible accident. Here are two accounts by Joe and Simon of what happened.

Joe's account

I hit the slope at the base of the cliff before I saw it coming. I was facing into the slope and both knees locked as I struck it. I felt a shattering blow in my knee, felt bones splitting, and screamed. The impact catapulted me over backwards and down the slope of the East Face. I slid, head-first, on my back. The rushing speed of it confused me. I thought of the drop below but felt nothing. Simon would be ripped off the mountain. He couldn't hold this. I screamed again as I jerked to a sudden violent stop.

10 Everything was still, silent. My thoughts raced madly. Then pain flooded down my thigh – a fierce burning fire coming down the inside of my thigh, seeming to ball in my groin, building and building until I cried out at it, and my breathing came in ragged gasps. My leg! ... My leg!

I hung, head down, on my back, left leg tangled in the rope above me and my right leg hanging slackly to one side. I lifted my head from the snow and stared, up across my chest, at a grotesque distortion in the right knee, twisting the leg into a strange zigzag. I didn't connect it with the pain which burnt my groin. That had nothing to do with my knee. I kicked my left leg free of the rope and swung round until I was hanging against the snow on my chest, feet down. The pain eased. I kicked my left foot into the slope and stood up.

20 A wave of nausea surged over me. I pressed my face into the snow, and the sharp cold seemed to calm me. Something terrible, something dark with dread occurred to me, and as I thought about it I felt the dark thought break into panic: 'I've broken my leg, that's it. I'm dead. Everyone said it ... if there's just two of you a broken ankle could turn into a death sentence ... if it's broken ... if ... It doesn't hurt so much, maybe I've just ripped something.'

30 I kicked my right leg against the slope, feeling sure it wasn't broken. My knee exploded. Bone grated, and the fireball rushed from groin to knee. I screamed. I looked down at the knee and could see it was broken, yet I tried not to believe what I was seeing. It wasn't just broken, it was ruptured, twisted, crushed, and I could see the kink in the joint and knew what had happened. The impact had driven my lower leg up through the knee joint. ...

I dug my axes into the snow, and pounded my good leg deeply into the soft slope until I felt sure it wouldn't slip. The effort brought back the nausea and I felt my head spin giddily to the point of fainting. I moved and a searing spasm of pain cleared away the faintness. I could see the summit of Seria Norte away to the west. I was not far below it. The sight drove home how desperately things had changed. We were above 19,000 feet, still on the ridge, and very much alone. I looked south at the small rise I had hoped to scale quickly and it seemed to grow with every second that I stared. I would never get over it. Simon would not be able to get me up it. He would leave me. He had no choice. I held my breath, thinking about it. Left here?

Simon's account

Joe had disappeared behind a rise in the ridge and began moving faster than I could go. I was glad we had put the steep section behind us at last. ... I felt tired and was grateful to be able to follow Joe's tracks instead of breaking trail*.

I rested a while when I saw that Joe had stopped moving. Obviously he had found an obstacle and I thought I would wait until he started moving again. When the rope moved again I trudged forward after it, slowly.

50 Suddenly there was a sharp tug as the rope lashed out taut across the slope. I was pulled forward several feet as I pushed my axes into the snow and braced myself for another jerk. Nothing happened. I knew that Joe had fallen, but I couldn't see him, so I stayed put. I waited for about ten minutes until the tautened rope went slack on the snow and I felt sure that Joe had got his weight off me. I began to move along his footsteps cautiously, half expecting something else to happen. I kept tensed up and ready to dig my axes in at the first sign of trouble.

60 As I crested the rise, I could see down a slope to where the rope disappeared over the edge of a drop. I approached slowly, wondering what had happened. When I reached the top of the drop I saw Joe below me. He had one foot dug in and was leaning against the slope with his face buried in the snow. I asked him what had happened and he looked at me in surprise. I knew he was injured, but the significance didn't hit me at first.

He told me very calmly that he had broken his leg. He looked pathetic, and my immediate thought came without any emotion. ... You're dead ... no two ways about it! I think he knew it too. I could see it in his face. It was all totally rational. I knew where we were, I took in everything around me instantly, and knew he was dead. It never occurred to me that I might also die. I accepted without question that I could get off the mountain alone. I had no doubt about that.

70 ... Below him I could see thousands of feet of open face falling into the eastern glacier bay. I watched him quite dispassionately. I couldn't help him, and it occurred to me that in all likelihood he would fall to his death. I wasn't disturbed by the thought. In a way I hoped he would fall. I knew I couldn't leave him while he was still fighting for it, but I had no idea how I might help him. I could get down. If I tried to get him down I might die with him. It didn't frighten me. It just seemed a waste. It would be pointless. I kept staring at him, expecting him to fall ...

Climate change

The world is warming up. Already 150,000 people are dying every year because of climate change and, within 50 years, one-third of all land-based species could face extinction. If we carry on the way we are now, by 2100 the planet will likely be hotter than it's been at any point in the past two million years.

But catastrophic climate change isn't inevitable. We know that climate change is caused by burning fossil fuels. The technologies that could dramatically reduce our dependence on fossil fuels – **decentralised energy, renewables and efficiency**, hybrid cars, efficient buildings – already exist and have been proven to work. If we start cutting our emissions now, using these ready-to-go technologies, then there is still a chance to avoid the most catastrophic impacts of climate change.

What we're lacking is real action. The government needs to put in place meaningful policies to urgently reduce emissions – and to act on them immediately. Under New Labour, carbon emissions have risen. The government is set to miss its own emissions targets. Whether through political cowardice or industry lobbying, the government is failing to put their words into action.

We're the last generation that can stop this global catastrophe, and we need your help.

What you can do

We **can** stop catastrophic climate change. We know what causes it, we have the technologies to prevent it, and there's a rapidly growing understanding of just how urgent the need for action is.

All that's missing is the action itself.

The government needs to put in place meaningful policies to urgently reduce emissions – and to act on them immediately. We need your help to persuade them. Together, we can stop climate chaos.

Climate Change: The Facts

Adapted from an article published in *The Guardian* newspaper supplement – Science Course Part III: The Earth (in association with the Science Museum)

The subject of global warming has become impossible to ignore. But what are its implications? And is mankind really to blame?

Twenty years ago global warming was a fringe subject – it seemed absurd that we could be having an effect on the Earth's climate. Today global warming has become a political hot potato and the majority of scientists agree that it is a reality and here to stay.

What is global warming?

Extra carbon dioxide [CO₂] in the atmosphere enhances a natural process known as the greenhouse effect. Greenhouse gases, such as carbon dioxide, absorb heat and release it slowly. Without this process, Earth would be too cold for life to survive.

Over the past 200 years mankind has increased the proportion of greenhouse gases in the Earth's atmosphere, primarily by burning fossil fuels. The higher levels of greenhouse gases are causing our planet to warm – global warming.

Is global warming really caused by humans?

Since 1958 scientists at the Mauna Loa Observatory in Hawaii have taken continuous measurements of atmospheric carbon dioxide. The levels go up and down with the seasons, but overall they demonstrate a relentless rise.

Bubbles of gas from ice cores and the chemical composition of fossil shells provide us with a record of atmospheric carbon dioxide going back millions of years. There have been warm periods in the past where carbon dioxide was at levels similar to those seen today. However, the rate of change that we see today is exceptional: carbon dioxide levels have never risen so fast. By 2000 they were 17% higher than in 1959.

Accompanying this rapid increase in carbon dioxide we see a rise in average global temperatures. Warming in the past 100 years has caused about a 0.8°C increase in global average temperature. Eleven of the 12 years in the period 1995-2006 rank among the top 12 warmest years since 1850.

There is little doubt that humanity is responsible for the rapid rise in carbon dioxide levels. The rise in temperatures that has accompanied our fossil fuel addiction seem too much of a coincidence to be just chance. Most people now agree that our actions are having an effect on Earth's climate.

How hot will it get?

Estimates from some of the world's best climate scientists – the Intergovernmental Panel on Climate Change (IPCC) – suggest that the average global temperature will have risen between 2.5°C and 10.4°C by 2100.

Whether it will be the lower or upper end of this estimate is unclear. Currently, oceans and trees are helping to mop up some of the heat by absorbing carbon dioxide, but eventually they will reach capacity and be unable to absorb more. At this point the atmosphere will take the full load, potentially pushing temperatures sky high.

Is it just carbon dioxide we need to worry about?

No. Carbon dioxide is just one of a number of greenhouse gases, which include water vapour, methane, nitrous oxide and ozone. Livestock farming (farting cows) and rice paddy farming (rotting vegetation) have contributed to higher levels of methane in the atmosphere.

What is more, methane has a nasty sting in its tail. Although it only hangs around in the atmosphere for about 10 years, it is far more potent as a greenhouse gas, trapping about 20 times as much heat as carbon dioxide.

What are tipping points?

A steady rise in greenhouse gases won't necessarily cause a steady rise in global temperatures. Earth's climate is highly complicated and scientists fear that many delicate thresholds exist, which once passed could trigger a dramatic change. These thresholds have become known as "tipping points".

One potential trigger could be the release of methane from methane clathrate compounds buried on the sea floor. Currently these deposits are frozen, but if the oceans warm sufficiently they could melt, burping vast quantities of methane into the atmosphere. Scientists fear that this sudden release may cause a runaway greenhouse effect.

How will global warming affect us?

Although average global temperatures are predicted to rise, this doesn't necessarily mean that we'll be sitting in our deckchairs all year round. The extra energy from the added warmth in the Earth's atmosphere will need to find a release, and the result is likely to be more extreme weather.

If we stop emitting CO₂ now will it get better straight away?

Unfortunately not. Research shows that we are already committed to an average global temperature rise of nearly 1C, lasting for at least the next 500 years.

From A Game of Polo with a Headless Goat

Emma Levine travelled throughout Asia researching and filming unusual sports. In this passage she writes about a donkey race in Karachi.

We drove off to find the best viewing spot, which turned out to be the crest of the hill so we could see the approaching race. I asked the lads if we could join in the 'Wacky Races' and follow the donkeys, and they loved the idea. 'We'll open the car boot, you climb inside and point your camera towards the race. As the donkeys overtake us, we'll join the cars.' 'But will you try and get to the front?' 'Oh yes, that's no problem.'

10 The two lads who had never been interested in this Karachi sport were suddenly fired up with enthusiasm. We waited for eternity on the brow of the hill, me perched in the boot with a zoom lens pointing out. Nearly one hour later I was beginning to feel rather silly when the only action was a villager on a wobbly bicycle, who nearly fell off as he cycled past and gazed around at us.

Several vehicles went past, and some donkey-carts carrying spectators. 'Are they coming?' we called out to them. 'Coming, coming,' came the reply. I was beginning to lose faith in its happening, but the lads remained confident.

20 Just as I was assuming that the race had been cancelled, we spotted two approaching donkey-carts in front of a cloud of fumes and dust created by some fifty vehicles roaring up in their wake. As they drew nearer, Yaqoob revved up the engine and began to inch the car out of the lay-by. The two donkeys were almost dwarfed by their entourage; but there was no denying their speed – the Kibla donkey is said to achieve speeds of up to 40 kph, and this looked close. The two were neck-and-neck, their jockeys perched on top of the tiny carts using their whips energetically, although not cruelly.

The noise of the approaching vehicles grew; horns tooting, bells ringing, and the special rattles used just for this purpose (like maracas, a metal container filled with dried beans). Men standing on top of their cars and vans, hanging out of taxis and perched on lorries, all cheered and shouted, while the vehicles jostled to get to the front of the convoy.

30 Yaqoob chose exactly the right moment to edge out of the road and swerve in front of the nearest car, finding the perfect place to see the two donkeys and at the front of the vehicles. This was Formula One without rules, or a city-centre rush hour gone anarchic; a complete flouting of every type of traffic rule and common sense.

40 Our young driver relished this unusual test of driving skills. It was survival of the fittest, and depended upon the ability to cut in front of a vehicle with a sharp flick of the steering wheel (no lane discipline here); quick reflexes to spot a gap in the traffic for a couple of seconds; nerves of steel, and an effective horn. There were two races – the motorized spectators at the back; in front, the two donkeys, still running close and amazingly not put off by the uproar just behind them. Ahead of the donkeys, oncoming traffic – for it was a main road – had to dive into the ditch and wait there until we had passed. Yaqoob loved it. We stayed near to the front, his hand permanently on the horn and his language growing more colourful with every vehicle that tried to cut in front. ...

The road straightened and levelled, and everyone picked up speed as we neared the end of the race. But just as they were reaching the finishing line, the hospital gate, there was a near pile-up as the leading donkey swerved, lost his footing and he and the cart tumbled over. The race was over.

50 And then the trouble began. I assumed the winner was the one who completed the race but it was not seen that way by everyone. Apart from the two jockeys and 'officials' (who, it turned out, were actually monitoring the race) there were over a hundred punters who had all staked money on the race, and therefore had strong opinions. Some were claiming that the donkey had fallen because the other one had been ridden too close to him. Voices were raised, fists were out and tempers rising. Everyone gathered around one jockey and official, while the bookmakers were trying to insist that the race should be re-run.

60 Yaqoob and Iqbal were nervous of hanging around a volatile situation. They agreed to find out for me what was happening ordering me to stay inside the car as they were swallowed up by the crowd. They emerged sometime later. 'It's still not resolved,' said Iqbal, 'but it's starting to get nasty. I think we should leave.' As we drove away, Yaqoob reflected on his driving skills. 'I really enjoyed that,' he said as we drove off at a more sedate pace. 'But I don't even have my licence yet because I'm underage!'

They both found this hilarious, but I was glad he hadn't told me before; an inexperienced, underage driver causing a massive pile-up in the middle of the high-stakes donkey race could have caused problems.

Emma Levine

From A Passage to Africa

George Alagiah writes about his experiences as a television reporter during the war in Somalia, Africa in the 1990s. He won a special award for his report on the incidents described in this passage.

I saw a thousand hungry, lean, scared and betrayed faces as I criss-crossed Somalia between the end of 1991 and December 1992, but there is one I will never forget.

I was in a little hamlet just outside Gufgaduud, a village in the back of beyond, a place the aid agencies had yet to reach. In my notebook I had jotted down instructions on how to get there. 'Take the Badale Road for a few kilometres till the end of the tarmac, turn right on to a dirt track, stay on it for about forty-five minutes – Gufgaduud. Go another fifteen minutes approx. – like a ghost village.' ...

10 In the ghoulish manner of journalists on the hunt for the most striking pictures, my cameraman ... and I tramped from one hut to another. What might have appalled us when we'd started our trip just a few days before no longer impressed us much. The search for the shocking is like the craving for a drug: you require heavier and more frequent doses the longer you're at it. Pictures that stun the editors one day are written off as the same old stuff the next. This sounds callous, but it is just a fact of life. It's how we collect and compile the images that so move people in the comfort of their sitting rooms back home.

20 There was Amina Abdirahman, who had gone out that morning in search of wild, edible roots, leaving her two young girls lying on the dirt floor of their hut. They had been sick for days, and were reaching the final, enervating stages of terminal hunger. Habiba was ten years old and her sister, Ayaan, was nine. By the time Amina returned, she had only one daughter. Habiba had died. No rage, no whimpering, just a passing away – that simple, frictionless, motionless deliverance from a state of half-life to death itself. It was, as I said at the time in my dispatch, a vision of 'famine away from the headlines, a famine of quiet suffering and lonely death'.

30 There was the old woman who lay in her hut, abandoned by relations who were too weak to carry her on their journey to find food. It was the smell that drew me to her doorway: the smell of decaying flesh. Where her shinbone should have been there was a festering wound the size of my hand. She'd been shot in the leg as the retreating army of the deposed dictator ... took revenge on whoever it found in its way. The shattered leg had fused into the gentle V-shape of a boomerang. It was rotting; she was rotting. You could see it in her sick, yellow eyes and smell it in the putrid air she recycled with every struggling breath she took.

And then there was the face I will never forget.

40 My reaction to everyone else I met that day was a mixture of pity and revulsion*. Yes, revulsion. The degeneration of the human body, sucked of its natural vitality by the twin evils of hunger and disease, is a disgusting thing. We never say so in our TV reports. It's a taboo that has yet to be breached. To be in a feeding centre is to hear and smell the excretion of fluids by people who are beyond controlling their bodily functions. To be in a feeding centre is surreptitiously* to wipe your hands on the back of your trousers after you've held the clammy palm of a mother who has just cleaned vomit from her child's mouth.

There's pity, too, because even in this state of utter despair they aspire to a dignity that is almost impossible to achieve. An old woman will cover her shrivelled body with a soiled cloth as your gaze turns towards her. Or the old and dying man who keeps his hoe next to the mat with which, one day soon, they will shroud his corpse, as if he means to go out and till the soil once all this is over.

I saw that face for only a few seconds, a fleeting meeting of eyes before the face turned away, as its owner retreated into the darkness of another hut. In those brief moments there had been a smile, not from me, but from the face. It was not a smile of greeting, it was not a smile of joy – how could it be? – but it was a smile
50 nonetheless. It touched me in a way I could not explain. It moved me in a way that went beyond pity or revulsion.

What was it about that smile? I had to find out. I urged my translator to ask the man why he had smiled. He came back with an answer. 'It's just that he was embarrassed to be found in this condition,' the translator explained. And then it clicked. That's what the smile had been about. It was the feeble smile that goes with apology, the kind of smile you might give if you felt you had done something wrong.

Normally inured* to stories of suffering, accustomed to the evidence of deprivation, I was unsettled by this one smile in a way I had never been before. There is an unwritten code between the journalist and his subjects in these
60 situations. The journalist observes, the subject is observed. The journalist is active, the subject is passive. But this smile had turned the tables on that tacit agreement. Without uttering a single word, the man had posed a question that cut to the heart of the relationship between me and him, between us and them, between the rich world and the poor world. If he was embarrassed to be found weakened by hunger and ground down by conflict, how should I feel to be standing there so strong and confident?

I resolved there and then that I would write the story of Gufgaduud with all the power and purpose I could muster. It seemed at the time, and still does, the only adequate answer a reporter can give to the man's question.

I have one regret about that brief encounter in Gufgaduud. Having searched
70 through my notes and studied the dispatch that the BBC broadcast, I see that I never found out what the man's name was. Yet meeting him was a seminal moment in the gradual collection of experiences we call context. Facts and figures are the easy part of journalism. Knowing where they sit in the great scheme of things is much harder. So, my nameless friend, if you are still alive, I owe you one.

George Alagiah

**revulsion:* disgust

**surreptitiously:* secretly

**inured:* hardened

From The Explorer's Daughter

As a small child, Kari Herbert lived, with her family, among the Inughuit people (sometimes called Eskimos) in the harsh environment of the Arctic. In 2002 she revisited the area, staying near Thule, a remote settlement in the snowy wastes of north Greenland. In this passage she writes about her experience of watching a hunt for the narwhal, a toothed whale, and what she thought and felt about it.

Two hours after the last of the hunters had returned and eaten, narwhal were spotted again, this time very close. Within an hour even those of us on shore could with the naked eye see the plumes of spray from the narwhal catching the light in a spectral play of colour. Two large pods* of narwhal circled in the fjord*, often looking as if they were going to merge, but always slowly, methodically passing each other by. Scrambling back up to the lookout I looked across the glittering kingdom in front of me and took a sharp intake of breath. The hunters were dotted all around the fjord. The evening light was turning butter-gold, glinting off man and whale and catching the soft billows of smoke from a lone hunter's pipe. From where we sat at the lookout it looked as though the hunters were close enough to touch the narwhal with their bare hands and yet they never moved. Distances are always deceptive in the Arctic, and I fell to wondering if the narwhal existed at all or were instead mischievous tricks of the shifting light. ...

The narwhal rarely stray from High Arctic waters, escaping only to the slightly more temperate waters towards the Arctic Circle in the dead of winter, but never entering the warmer southern seas. In summer the hunters of Thule are fortunate to witness the annual return of the narwhal to the Inglefield Fjord, on the side of which we now sat.

The narwhal ... is an essential contributor to the survival of the hunters in the High Arctic. The mattak or blubber* of the whale is rich in necessary minerals and vitamins, and in a place where the climate prohibits the growth of vegetables or fruit, this rich source of vitamin C was the one reason that the Eskimos have never suffered from scurvy*. ... For centuries the blubber of the whales was also the only source of light and heat, and the dark rich meat is still a valuable part of the diet for both man and dogs (a single narwhal can feed a team of dogs for an entire month). Its single ivory tusk, which can grow up to six feet in length, was used for harpoon tips and handles for other hunting implements (although the ivory was found to be brittle and not hugely satisfactory as a weapon), for carving protective tupilaks*, and even as a central beam for their small ancient dwellings. Strangely, the tusk seems to have little use for the narwhal itself; they do not use the tusk to break through ice as a breathing hole, nor will they use it to catch or attack prey, but rather the primary use seems to be to disturb the top of the sea bed in order to catch Arctic halibut for which they have a particular predilection*. Often the ends of their tusks are worn down or even broken from such usage.

The women clustered on the knoll of the lookout, binoculars pointing in every direction, each woman focusing on her husband or family member, occasionally spinning round at a small gasp or jump as one of the women saw a hunter near a narwhal. ... Each wife knew her husband instinctively and watched their progress intently; it was crucial to her that her husband catch a narwhal – it was part of their

The narwhal ... are intelligent creatures, their senses are keen and they talk to one another under the water. Their hearing is particularly developed and they can hear the sound of a paddling kayak from a great distance. That ... was why the hunters had to sit so very still in the water.

50 One hunter was almost on top of a pair of narwhal, and they were huge. He gently picked up his harpoon and aimed — in that split second my heart leapt for both hunter and narwhal. I urged the man on in my head; he was so close, and so brave to attempt what he was about to do — he was miles from land in a flimsy kayak, and could easily be capsized and drowned. The hunter had no rifle, only one harpoon with two heads and one bladder. It was a foolhardy exercise and one that could only inspire respect. And yet at the same time my heart also urged the narwhal to dive, to leave, to survive.

60 This dilemma stayed with me the whole time that I was in Greenland. I understand the harshness of life in the Arctic and the needs of the hunters and their families to hunt and live on animals and sea mammals that we demand to be protected because of their beauty. And I know that one cannot afford to be sentimental in the Arctic. ‘How can you possibly eat seal?’ I have been asked over and over again. True, the images that bombarded us several years ago of men battering seals for their fur hasn’t helped the issue of polar hunting, but the Inughuit do not kill seals using this method, nor do they kill for sport. They use every part of the animals they kill, and most of the food in Thule is still brought in by the hunter-gatherers and fishermen. Imported goods can only ever account for part of the food supply; there is still only one annual supply ship that makes it through the ice to Qaanaaq, and the small twice-weekly plane from West Greenland can only carry a certain amount of goods. Hunting is still an absolute necessity in Thule.

Kari Herbert

*pods**: small groups of whales

*fjord**: a long, narrow inlet of the sea with steep sides

*mattak or blubber**: the fatty skin of the whale

*scurvy**: a painful, weakening disease caused by lack of vitamin C

*tupilaks**: figures with magical powers, charms

*predilection**: liking

Explorers, or boys messing about? Either way, taxpayer gets rescue bill

Adapted from an article published in *The Guardian* newspaper, Tuesday January 28 2003

Helicopter duo plucked from liferaft after Antarctic crash

Their last expedition ended in farce when the Russians threatened to send in military planes to intercept them as they tried to cross into Siberia via the icebound Bering Strait.

Yesterday a new adventure undertaken by British explorers Steve Brooks and Quentin Smith almost led to tragedy when their helicopter plunged into the sea off Antarctica.

The men were plucked from the icy water by a Chilean naval ship after a nine-hour rescue which began when Mr Brooks contacted his wife, Jo Vestey, on his satellite phone asking for assistance. The rescue involved the Royal Navy, the RAF and British coastguards.

Last night there was resentment in some quarters that the men's adventure had cost the taxpayers of Britain and Chile tens of thousands of pounds.

Experts questioned the wisdom of taking a small helicopter – the four-seater Robinson R44 has a single engine – into such a hostile environment.

There was also confusion about what exactly the men were trying to achieve. A website set up to promote the Bering Strait expedition claims the team were planning to fly from the north to south pole in their “trustworthy helicopter”.

But Ms Vestey claimed she did not know what the pair were up to, describing them as “boys messing about with a helicopter”.

The drama began at around 1am British time when Mr Brooks, 42, and 40-year-old Mr Smith, also known as Q, ditched into the sea 100 miles off Antarctica, about 36 miles north of Smith Island, and scrambled into their liferaft.

Mr Brooks called his wife in London on his satellite phone. She said: “He said they were both in the liferaft but were okay and could I call the emergency people?”

Meanwhile, distress signals were being beamed from the ditched helicopter and from Mr Brooks' Breitling emergency watch, a wedding present.

The signals from the aircraft were deciphered by Falmouth* coastguard and passed on to the rescue coordination centre at RAF Kinloss in Scotland.

The Royal Navy's ice patrol ship, HMS Endurance, which was 180 miles away surveying uncharted waters, began steaming towards the scene and dispatched its two Lynx helicopters.

One was driven back because of poor visibility but the second was on its way when the men were picked up by a Chilean naval vessel at about 10.20am British time.

Though the pair wore survival suits and the weather at the spot where they ditched was clear, one Antarctic explorer told Mr Brooks' wife it was “nothing short of a miracle” that they had survived.

Both men are experienced adventurers. Mr Brooks, a property developer from London, has taken part in expeditions to 70 countries in 15 years. He has trekked solo to Everest base camp and walked barefoot for three days in the Himalayas. He has negotiated the white water rapids of the Zambezi river by kayak and survived a charge by a silver back gorilla in the Congo. He is also a qualified mechanical engineer and pilot.

He and his wife spent their honeymoon flying the helicopter from Alaska to Chile. The 16,000-mile trip took three months.

Mr Smith, also from London, claims to have been flying since the age of five. He has twice flown a helicopter around the globe and won the world freestyle helicopter flying championship.

Despite their experience, it is not the first time they have hit the headlines for the wrong reasons.

In April, Mr Brooks and another explorer, Graham Stratford, were poised to become the first to complete a crossing of the 56-mile wide frozen Bering Strait between the US and Russia in an amphibious vehicle, Snowbird VI, which could carve its way through ice floes and float in the water in between.

But they were forced to call a halt after the Russian authorities told them they would scramble military helicopters to lift them off the ice if they crossed the border.

Ironically, one of the aims of the expedition, for which Mr Smith provided air back-up, was to demonstrate how good relations between east and west had become.

The wisdom of the team's latest adventure was questioned by, among others, Günter Endres, editor of Jane's Helicopter Markets and Systems, said: "I'm surprised they used the R44. I wouldn't use a helicopter like that to go so far over the sea. It sounds as if they were pushing it to the maximum".

A spokesman for the pair said it was not known what had gone wrong. The flying conditions had been "excellent".

The Ministry of Defence said the taxpayer would pick up the bill, as was normal in rescues in the UK and abroad. The spokesperson said it was "highly unlikely" it would recover any of the money.

Last night the men were on their way to the Chilean naval base Eduardo Frei, where HMS Endurance was to pick them up. Ms Vestey said: "They have been checked and appear to be well. I don't know what will happen to them once they have been picked up by HMS Endurance – they'll probably have their bottoms kicked and be sent home the long way".

From Taking on the World

Ellen MacArthur became famous in 2001 when she competed in the Vendée Globe solo round-the-world yacht race. She was the youngest (24 years old) and probably the shortest (just 5ft 2in!) competitor. She came second, despite appalling weather, exhaustion and, as she describes here, problems with her boat.

I climbed the mast on Christmas Eve, and though I had time to get ready, it was the hardest climb to date. I had worked through the night preparing for it, making sure I had all the tools, mouse lines* and bits I might need, and had agonized for hours over how I should prepare the halyard* so that it would stream out easily below me and not get caught as I climbed.

When it got light I decided that the time was right. I kitted up in my middle-layer clothes as I didn't want to wear so much that I wouldn't be able to move freely up there. The most dangerous thing apart from falling off is to be thrown against the mast, and though I would be wearing a helmet it would not be difficult to break
10 bones up there. ...

I laid out the new halyard on deck, flaking it neatly so there were no twists. As I took the mast in my hands and began to climb I felt almost as if I was stepping up to the moon – a world over which I had no control. You can't ease the sheets* or take a reef*, nor can you alter the settings for the autopilot. If something goes wrong you are not there to attend to it. You are a passive observer looking down at your boat some 90 feet below you. After climbing just a couple of metres I realized how hard it was going to be, I couldn't feel my fingers – I'd need gloves, despite the loss in dexterity. I climbed down, getting soaked as we ploughed into a wave – the decks around my feet were awash. I unclipped my jumar* from the halyard and put on a
20 pair of sailing gloves. There would be no second climb on this one – I knew that I would not have the energy.

As I climbed my hands were more comfortable, and initially progress was positive. But it got harder and harder as I was not only pulling my own weight up as I climbed but also the increasingly heavy halyard – nearly 200 feet of rope by the time I made it to the top. The physical drain came far less from the climbing than from the clinging on. The hardest thing is just to hang on as the mast slices erratically through the air. There would be the odd massive wave which I could feel us surf down, knowing we would pile into the wave in front. I would wrap my arms around the mast and press my face against its cold and slippery carbon surface, waiting for the
30 shuddering slowdown. Eyes closed and teeth gritted, I hung on tight, wrists clenched together, and hoped. Occasionally on the smaller waves I would be thrown before I could hold on tight, and my body and the tools I carried were thrown away from the mast; I'd be hanging on by just one arm, trying to stop myself from smacking back into the rig.

By the third spreader* I was exhausted; the halyard was heavier and the motion more violent. I held on to her spreader base and hung there, holding tight to breathe more deeply and conjure up more energy. But I realized that the halyard was tight and that it had caught on something. ... I knew that if I went down to free it I would not have the energy to climb up once again. I tugged and tugged on the rope – the frustration was unreal. It had to come, quite simply the rope had to come free.
40 Luckily with all the pulling I managed to create enough slack to make it to the top, but now I was even more exhausted. I squinted at the grey sky above me and watched the mast-head whip across the clouds. The wind whistled past us, made visible by the snow that had begun to fall. Below the sea stretched out for ever, the size and length of the waves emphasized by this new aerial view. This is what it must look like to the albatross.

I rallied once more and left the safety of the final spreader for my last hike to the top. The motion was worse than ever, and as I climbed I thought to myself, not far now, kiddo, come on, just keep moving ... As the mast-head came within reach
50 there was a short moment of relief; at least there was no giving up now I had made it – whatever happened now I had the whole mast to climb down. I fumbled at the top of the rig, feeding in the halyard and connecting the other end to the top of *Kingfisher's* mast. The job only took half an hour – then I began my descent. This was by far the most dangerous part and I had my heart in my mouth – no time for complacency now, I thought, not till you reach the deck, kiddo, it's far from over...

It was almost four hours before I called Mark back and I shook with exhaustion as we spoke. We had been surfing at well over 20 knots while I was up there. My limbs were bruised and my head was spinning, but I felt like a million dollars as I spoke on the phone. Santa had called on *Kingfisher* early and we had the best present ever –
60 a new halyard.

Ellen MacArthur

*mouse line**: length of wire wrapped across the mouth of a hook, or through a shackle pin and around the shackle, for the sake of security

*halyard**: a rope used for raising and lowering sails

*sheet**: a line to control the sails

*reef**: reduces area of sails

*jumar**: a climbing device that grips the rope so that it can be climbed

*spreader**: a bar attached to a yacht's mast

From Chinese Cinderella

Growing up in a wealthy family in 1950s Hong Kong, Adeline Yen Mah should have had an enviable childhood, but she was rejected by her dominating stepmother and despised by her brothers and sisters. She was sent to a boarding school and left there. In this extract from her autobiography she relates one of the few occasions when she went home.

Time went by relentlessly and it was Saturday again. Eight weeks more and it would be the end of term ... in my case perhaps the end of school forever.

Four of us were playing Monopoly. My heart was not in it and I was losing steadily. Outside it was hot and there was a warm wind blowing. The radio warned of a possible typhoon the next day. It was my turn and I threw the dice. As I played, the thought of leaving school throbbed at the back of my mind like a persistent toothache.

‘Adeline!’ Ma-mien Valentino was calling.

10 ‘You can’t go now,’ Mary protested. ‘For once I’m winning. One, two, three, four. Good! You’ve landed on my property. Thirty-five dollars, please. Oh, good afternoon, Mother Valentino!’

We all stood up and greeted her.

‘Adeline, didn’t you hear me call you? Hurry up downstairs! Your chauffeur is waiting to take you home!’

Full of foreboding, I ran downstairs as in a nightmare, wondering who had died this time. Father’s chauffeur assured me everyone was healthy.

‘Then why are you taking me home?’ I asked.

‘How should I know?’ he answered defensively, shrugging his shoulders. ‘Your guess is as good as mine. They give the orders and I carry them out.’

20 During the short drive home, my heart was full of dread and I wondered what I had done wrong. Our car stopped at an elegant villa at mid-level, halfway up the hill between the peak and the harbour.

‘Where are we?’ I asked foolishly.

‘Don’t you know anything?’ the chauffeur replied rudely. ‘This is your new home. Your parents moved here a few months ago.’

‘I had forgotten,’ I said as I got out.

Ah Gum opened the door. Inside, it was quiet and cool.

‘Where is everyone?’

30 ‘Your mother is out playing bridge. Your two brothers and Little Sister are sunbathing by the swimming-pool. Your father is in his room and wants to see you as soon as you get home.’

‘See me in his room?’ I was overwhelmed by the thought that I had been summoned by Father to enter the Holy of Holies – a place to which I had never been invited. Why? ...

Timidly, I knocked on the door. Father was alone, looking relaxed in his slippers and bathrobe, reading a newspaper. He smiled as I entered and I saw he was in a happy mood. I breathed a small sigh of relief at first but became uneasy when I wondered why he was being so nice, thinking, Is this a giant ruse on his part to trick me? Dare I let my guard down?

40 ‘Sit down! Sit down!’ He pointed to a chair. ‘Don’t look so scared. Here, take a look at this! They’re writing about someone we both know, I think.’

He handed me the day’s newspaper and there, in one corner, I saw my name ADELINE YEN in capital letters prominently displayed.

‘It was announced today that 14-year-old Hong Kong schoolgirl ADELINE JUN-LING YEN of Sacred Heart Canossian School, Caine Road, Hong Kong, has won first prize in the International Play-writing Competition held in London, England, for the 1951–1952 school year. It is the first time that any local Chinese student from Hong Kong has won such a prestigious event. Besides a medal, the prize comes with a cash reward of FIFTY ENGLISH POUNDS. Our sincere congratulations, ADELINE YEN, for
50 bringing honour to Hong Kong. We are proud of you’.

Is it possible? Am I dreaming? Me, the winner?

‘I was going up the lift this morning with my friend C.Y. Tung when he showed me this article and asked me, “Is the winner Adeline Jun-ling Yen related to you? The two of you have the same uncommon last name.” Now C.Y. himself has a few children about your age but so far none of them has won an international literary prize, as far as I know. So I was quite pleased to tell him you are my daughter. Well done!’

He looked radiant. For once, he was proud of me. In front of his revered colleague, C.Y. Tung, a prominent fellow businessman also from Shanghai, I had
60 given him face. I thought, Is this the big moment I have been waiting for? My whole being vibrated with all the joy in the world. I only had to stretch out my hand to reach the stars.

‘Tell me, how did you do it?’ he continued. ‘How come *you* won?’

‘Well, the rules and regulations were so very complicated. One really has to be dedicated just to understand what they want. Perhaps I was the only one determined enough to enter and there were no other competitors!’

He laughed approvingly. ‘I doubt it very much but that’s a good answer.’

‘Please, Father,’ I asked boldly, thinking it was now or never. ‘May I go to university in England too, just like my brothers?’

70 ‘I do believe you have potential. Tell me, what would you study?’

My heart gave a giant lurch as it dawned on me that he was agreeing to let me go. How marvellous it was simply to be alive! Study? I thought. Going to England is like entering heaven. Does it matter what you do after you get to heaven?

But Father was expecting an answer. What about creative writing? After all, I had just won first prize in an international writing competition!

‘I plan to study literature. I’ll be a writer.’

‘Writer!’ he scoffed. ‘You are going to starve! What language are you going to write in and who is going to read your writing? Though you may think you’re an expert in both Chinese and English, your Chinese is actually rather elementary. As for

‘You will go to England with Third Brother this summer and you will go to medical school. After you graduate, you will specialise in obstetrics. Women will always be having babies. Women patients prefer women doctors. You will learn to deliver their babies. That’s a foolproof profession for you. Don’t you agree?’

Agree? Of course I agreed. Apparently, he had it all planned out. As long as he let me go to university in England, I would study anything he wished. How did that line go in Wordsworth’s poem? *Bliss was it in that dawn to be alive.*

90 ‘Father, I shall go to medical school in England and become a doctor. Thank you very, very much.’

Adeline Yen Mah
