

1.8 Erosion and deposition interacting with geology create distinctive landforms in river landscapes	a. The role of erosion processes and the influence of geology in the development of landforms: interlocking spurs, waterfalls, gorges and river cliffs. (11)
	b. The role of depositional processes in the formation of flood plains, levees and point bars.
	c. The interaction of deposition and erosion processes in the development of landforms (meanders, oxbow lakes).
