

## Topic 2: Movement analysis

| Subject content                                                                                                                                                                                   | What students need to learn                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| In this topic students will develop knowledge and understanding of the basic principles of movement and their effect on performance in physical activity and sport through the following content. |                                                                                                                                                                      |
| <b>2.1 Lever systems, examples of their use in activity and the mechanical advantage they provide in movement</b>                                                                                 | 2.1.1 First, second and third class levers and their use in physical activity and sport                                                                              |
|                                                                                                                                                                                                   | 2.1.2 Mechanical advantage and disadvantage (in relation to loads, efforts and range of movement) of the body's lever systems and the impact on sporting performance |
