

3.3 The principles of training and their application to personal exercise/ training programmes	3.3.1 Planning training using the principles of training: individual needs, specificity, progressive overload, FITT (frequency, intensity, time, type), overtraining, reversibility, thresholds of training (aerobic target zone: 60–80% and anaerobic target zone: 80%–90% calculated using simplified Karvonen formula, i.e. $(220) - (\text{your age}) = \text{MaxHR}$; $(\text{MaxHR}) \times (60\% \text{ to } 80\%) = \text{aerobic training zone}$; $(\text{MaxHR}) \times (80\% \text{ to } 90\%) = \text{anaerobic training zone}$)
	3.3.2 Factors to consider when deciding the most appropriate training methods and training intensities for different physical activities and sports (fitness/sport requirements, facilities available, current level of fitness)
	3.3.3 The use of different training methods for specific components of fitness, physical activity and sport: continuous, Fartlek, circuit, interval, plyometrics, weight/resistance. Fitness classes for specific components of fitness, physical activity and sport (body pump, aerobics, Pilates, yoga, spinning). The advantages and disadvantages of different training methods
