

1. The collection of data		
(a) Planning		
1a.01	Know that a hypothesis can be tested only through the appropriate collection and analysis of data. Formal use of null hypothesis will not be required.	Specifying a hypothesis is expected, e.g. a hypothesis such as 'as motor cycles get older their value is likely to go down'.
1a.02	Know the constraints that may be faced in designing an investigation to test a hypothesis including factors such as time, costs, ethical issues, confidentiality, convenience.	Give examples of these factors, e.g. salaries or difficulties in finding data.
1a.03	Determine proactive strategies to mitigate issues that might arise during the statistical enquiry process.	For example, dealing with difficulties in identifying the population, non-response issues or unexpected outcomes.
