

(a) The organism in the environment	
Students should:	
4.1	understand the terms population, community, habitat and ecosystem
4.2	<i>practical: investigate the population size of an organism in two different areas using quadrats</i>
4.3B understand the term biodiversity	
4.4B	<i>practical: investigate the distribution of organisms in their habitats and measure biodiversity using quadrats</i>
4.5	understand how abiotic and biotic factors affect the population size and distribution of organisms
