

3.2 Function notation	understand the concept that a function is a mapping between elements of two sets use function notations of the form $f(x) = \dots$ and $f : x \mapsto \dots$ understand the terms domain and range and which values may need to be excluded from the domain understand and find the composite function fg and the inverse function f^{-1}	$f(x) = \frac{1}{x},$ exclude $x = 0$ $f(x) = \sqrt{x+3},$ exclude $x < -3$ 'fg' will mean '<i>do g first, then f</i>'
